

# SORTING WASTE MAKES A DIFFERENCE!

At UBC, we sort our waste.  
Tip: Put only food scraps and food-soiled paper in the Food Scraps bin. No Plastic!

Food Scraps bins that have no contaminants are collected by UBC staff and taken to our compost facility—not the landfill!

Clean compost is then added to UBC soil to grow more plants. And that's good for everyone!

The organic material from the Food Scraps bin is put in our awesome compost machine. Plastic makes the machine break down.
