VINYL APPLICATION INSTRUCTIONS

1. Clean the application surface with a mild soap, like dishwashing soap. Don't dry surface.
2. Lay the decal flat and remove backing sheet, exposing the adhesive. Spray or sponge adhesive with soapy water
3. Apply the decal in position - as long as the application surface is wet, you can easily reposition the decal.
4. Once decal in position, gently work from the centre of the decal to the perimeter with a rigid squeegee (ie: credit card) to remove air bubbles and moisture.
5. Wipe off excess moisture.
6. After an hour or so, remove any remaining air bubbles, and ensure all edges laying flat. A damp sponge or rag is ideal, as you can press hard without damaging the decal.
7. When moisture has evaporated, decal will hold tight, remove masking paper on front of decal.
8. Stand back and admire your work!
